Week 1 — Number Sense & Numerals — Answer Key

Q1. D) 7000 — In 57,342 the digits are 5-7-3-4-2 (ten-thousands, thousands, hundreds, tens, ones). 7 sits in the thousands place → 7 × 1000 = 7000.

Q2. A) Sixty-eight thousand two hundred five — 68,205 reads as 68-thousand, 205.

Q3. B) 90000 + 3000 + 40 + 7 — 93,047: 9=ten-thousands(90000), 3=thousands(3000), 0=hundreds(0 — skipped), 4=tens(40), 7=ones(7).

Q4. B) 45,986 — Comparing the last three digits once "45," matches: 698 vs 986 vs 869 vs 689 → 986 is largest.

Q5. C) 71,999 — It's the only one starting 71, (the rest start 72,), so it's smaller than all of them.

Q6. A) 34125, 34251, 34512, 34521 — Smallest to largest by comparing digit by digit from the left.

Q7. B) 70000 — Successor = number + 1; 69,999 + 1 = 70,000.

Q8. A) 49999 — Predecessor = number − 1; 50,000 − 1 = 49,999.

Q9. A) 6700 — Rounding to the nearest hundred looks at the tens digit (4); since 4 < 5, round down: 6,742 → 6,700.

Q10. A) 3000 — Rounding to the nearest thousand looks at the hundreds digit (2); since 2 < 5, round down: 3,256 → 3,000.

Q11. A) XLVII — 47 = 40 (XL) + 7 (VII) = XLVII.

Q12. B) 74 — LXXIV = L(50) + X(10) + X(10) + IV(4) = 74.

Q13. C) 25 — The pattern adds 5 each time: 5, 10, 15, 20, 25, 30.

Q14. A) 54 — The pattern subtracts 9 each time: 81, 72, 63, 54, 45.

Q15. B) 100 — 1,00,000 ÷ 1,000 = 100.

Scoring: 15/15 — excellent, move on to Week 2. 13–14/15 — solid, just re-read the one or two missed explanations above. Below 13/15 — redo the whole assignment after 2 days before moving on; these are foundational for every later topic.
