Week 7 — Geometry, Perimeter & Area — Answer Key

Q1. B) 6 — A hexagon has 6 sides.

Q2. C) Circle — A circle is a curved shape with no corners.

Q3. D) 4 — A square has 4 lines of symmetry (2 diagonal, 1 vertical, 1 horizontal).

Q4. B) A — The letter A has a vertical line of symmetry; F, P, and N do not look the same when folded in half.

Q5. C) Line — A line extends forever in both directions, with no endpoints.

Q6. C) Line segment — A line segment has exactly two endpoints.

Q7. A) 36 cm — Perimeter of a square = 4 × side = 4 × 9 = 36 cm.

Q8. B) 18 cm — Perimeter of a triangle = sum of all sides = 5 + 6 + 7 = 18 cm.

Q9. A) 6 cm — Perimeter = 2 × (length + breadth), so 28 = 2 × (8 + breadth) → 14 = 8 + breadth → breadth = 6 cm.

Q10. B) 24 sq cm — Area of a rectangle = length × breadth = 6 × 4 = 24 sq cm.

Q11. C) 25 sq cm — Area of a square = side × side = 5 × 5 = 25 sq cm.

Q12. C) 4 — A complete turn is 360°, and each right angle is 90°; 360 ÷ 90 = 4.

Q13. C) Sphere — A sphere (like a ball) is entirely curved with no flat faces at all.

Q14. B) 6 — A cube has 6 square faces.

Q15. B) 50 m — Perimeter = 2 × (15 + 10) = 2 × 25 = 50 m.

Scoring: 15/15 — excellent, move to Week 8. 13–14/15 — solid, review the missed ones. Below 13/15 — the perimeter-vs-area mix-up is the most common error here; say out loud which one each question is asking for before calculating.
