Subtracting Figures — Achievers / HOTS — Answer Key

1. **D** — Figure (1) is made of the square outline, both diagonals (the X) and the triangular roof on top. Figure (2) is the triangular roof on top and both diagonals (the X) — taking that out of Figure (1) leaves the square outline, which is option D.
2. **C** — Figure (1) is made of the square outline, the triangular flap on the left, the triangular flap on the right and the triangular base at the bottom. Figure (2) is the triangular flap on the left and the triangular base at the bottom — taking that out of Figure (1) leaves the square outline and the triangular flap on the right, which is option C.
3. **D** — Figure (1) is made of the large triangle, the horizontal line through the middle and the vertical line through the middle. Figure (2) is the horizontal line through the middle and the vertical line through the middle — taking that out of Figure (1) leaves the large triangle, which is option D.
4. **A** — Figure (1) is made of the square outline, the small diamond inside and the circle in the middle. Figure (2) is the small diamond inside and the circle in the middle — taking that out of Figure (1) leaves the square outline, which is option A.
5. **B** — Figure (1) is made of the square outline, the horizontal line through the middle, the vertical line through the middle and both diagonals (the X). Figure (2) is the vertical line through the middle and both diagonals (the X) — taking that out of Figure (1) leaves the square outline and the horizontal line through the middle, which is option B.
6. **A** — Figure (1) is made of the small diamond inside, the square outline and the circle in the middle. Figure (2) is the circle in the middle and the square outline — taking that out of Figure (1) leaves the small diamond inside, which is option A.
7. **B** — Figure (1) is made of the square outline, the triangular roof on top, the triangular base at the bottom and both diagonals (the X). Figure (2) is the triangular roof on top and the triangular base at the bottom — taking that out of Figure (1) leaves the square outline and both diagonals (the X), which is option B.
8. **B** — Figure (1) is made of the large triangle, the circle in the middle and the horizontal line through the middle. Figure (2) is the circle in the middle and the horizontal line through the middle — taking that out of Figure (1) leaves the large triangle, which is option B.
9. **B** — Figure (1) is made of the square outline, the triangular flap on the left, the triangular flap on the right and the small square in the top-left corner. Figure (2) is the triangular flap on the left and the small square in the top-left corner — taking that out of Figure (1) leaves the square outline and the triangular flap on the right, which is option B.
10. **D** — Figure (1) is made of the square outline, the small diamond inside and the triangular roof on top. Figure (2) is the small diamond inside and the triangular roof on top — taking that out of Figure (1) leaves the square outline, which is option D.

11. **A** — Figure (1) is made of the square outline, the vertical line through the middle, the horizontal line through the middle and the small square in the top-left corner. Figure (2) is the small square in the top-left corner and the horizontal line through the middle — taking that out of Figure (1) leaves the square outline and the vertical line through the middle, which is option A.
12. **D** — Figure (1) is made of the small diamond inside, the large triangle and the circle in the middle. Figure (2) is the large triangle and the circle in the middle — taking that out of Figure (1) leaves the small diamond inside, which is option D.
13. **C** — Figure (1) is made of the square outline, the triangular roof on top, the triangular flap on the left and the triangular flap on the right. Figure (2) is the triangular roof on top and the triangular flap on the left — taking that out of Figure (1) leaves the square outline and the triangular flap on the right, which is option C.
14. **D** — If Figure (2) (the circle in the middle) is subtracted from Figure (1) and Figure (3) (the square outline and both diagonals (the X)) is left over, then Figure (1) must be Figure (2) and Figure (3) put back together — the circle in the middle, the square outline and both diagonals (the X), option D.
15. **B** — If Figure (2) (the triangular roof on top and the triangular base at the bottom) is subtracted from Figure (1) and Figure (3) (the square outline) is left over, then Figure (1) must be Figure (2) and Figure (3) put back together — the triangular roof on top, the triangular base at the bottom and the square outline, option B.

How to use this: 10+/15 is strong at this difficulty. For the two-part subtractions, cross out each subtracted part one at a time on paper; for the reversed questions, add Figure (2) and Figure (3) back together and check your answer still has *exactly* those parts — no more, no less.
