Subtracting Figures — Answer Key

1. **B** — Figure (1) is made of the square outline and both diagonals (the X). Figure (2) is both diagonals (the X) — taking that out of Figure (1) leaves the square outline, which is option B.
2. **C** — Figure (1) is made of the square outline and the triangular roof on top. Figure (2) is the triangular roof on top — taking that out of Figure (1) leaves the square outline, which is option C.
3. **D** — Figure (1) is made of the square outline, the horizontal line through the middle and the vertical line through the middle. Figure (2) is the horizontal line through the middle — taking that out of Figure (1) leaves the square outline and the vertical line through the middle, which is option D.
4. **D** — Figure (1) is made of the square outline and the small diamond inside. Figure (2) is the small diamond inside — taking that out of Figure (1) leaves the square outline, which is option D.
5. **B** — Figure (1) is made of the square outline and the circle in the middle. Figure (2) is the circle in the middle — taking that out of Figure (1) leaves the square outline, which is option B.
6. **B** — Figure (1) is made of the square outline, the triangular flap on the left and the triangular flap on the right. Figure (2) is the triangular flap on the left — taking that out of Figure (1) leaves the square outline and the triangular flap on the right, which is option B.
7. **D** — Figure (1) is made of the large triangle and the horizontal line through the middle. Figure (2) is the horizontal line through the middle — taking that out of Figure (1) leaves the large triangle, which is option D.
8. **B** — Figure (1) is made of the square outline, the triangular roof on top and the triangular base at the bottom. Figure (2) is the triangular base at the bottom — taking that out of Figure (1) leaves the square outline and the triangular roof on top, which is option B.
9. **D** — Figure (1) is made of the small diamond inside and the circle in the middle. Figure (2) is the circle in the middle — taking that out of Figure (1) leaves the small diamond inside, which is option D.
10. **D** — Figure (1) is made of the square outline, the vertical line through the middle and both diagonals (the X). Figure (2) is both diagonals (the X) — taking that out of Figure (1) leaves the square outline and the vertical line through the middle, which is option D.
11. **A** — Figure (1) is made of the square outline and the small square in the top-left corner. Figure (2) is the small square in the top-left corner — taking that out of Figure (1) leaves the square outline, which is option A.
12. **B** — Figure (1) is made of the large triangle and the circle in the middle. Figure (2) is the circle in the middle — taking that out of Figure (1) leaves the large triangle, which is option B.
13. **C** — Figure (1) is made of the square outline, the horizontal line through the middle, the vertical line through the middle and both diagonals (the X). Figure (2) is the horizontal line through the

middle and the vertical line through the middle — taking that out of Figure (1) leaves the square outline and both diagonals (the X), which is option C.

14. **D** — Figure (1) is made of the square outline, the triangular flap on the left, the triangular flap on the right and the triangular roof on top. Figure (2) is the triangular flap on the left and the triangular flap on the right — taking that out of Figure (1) leaves the square outline and the triangular roof on top, which is option D.
15. **B** — Figure (1) is made of the small diamond inside and the square outline. Figure (2) is the square outline — taking that out of Figure (1) leaves the small diamond inside, which is option B.

How to use this: cover the options and try to work out Figure (3) (or Figure (1), for the reversed questions) yourself before looking at A–D. Trace which named parts survive the subtraction one at a time rather than staring at the whole figure at once.
