Week 6 — Time & Calendar — Answer Key

Q1. C) 60 — 1 hour = 60 minutes.

Q2. B) 24 — 1 day = 24 hours.

Q3. C) 30 — April has 30 days.

Q4. C) 7 — January, March, May, July, August, October, December each have 31 days.

Q5. B) 6:45 p.m. — 4:30 p.m. + 2 h = 6:30 p.m.; + 15 min more = 6:45 p.m.

Q6. B) 3 h 35 min — 9:45 a.m. to 12:45 p.m. is 3 hours; 12:45 p.m. to 1:20 p.m. is 35 more minutes; total 3 h 35 min.

Q7. B) Saturday — The day right after Friday is Saturday.

Q8. B) Monday — 8 days later than the 1st is the 8th; since a week has 7 days, the day of the week repeats after 7 days, so the 8th is also a Monday.

Q9. B) 4 — 28 ÷ 7 = 4 weeks.

Q10. B) 60 — 1 minute = 60 seconds.

Q11. B) 5 — 15 − 10 = 5 days.

Q12. C) 11:15 — 10:50 + 25 min = 11:15.

Q13. D) 2024 — A year is a leap year if it divides exactly by 4 (and, for century years, by 400 too). 2024 ÷ 4 = 506 exactly.

Q14. C) 40 min — 7:50 a.m. to 8:30 a.m. is 40 minutes.

Q15. B) Tuesday, 4:40 a.m. — 11:40 p.m. + 5 hours crosses midnight: 11:40 p.m. → 12:40 a.m. (1 h) → ... → 4:40 a.m. (5 h total), and since it crossed midnight, the day becomes Tuesday.

Scoring: 15/15 — excellent, move to Week 7. 13–14/15 — solid, review the missed ones. Below 13/15 — practice "crossing noon/midnight" time questions specifically — that's the single most common mistake at this stage.
