Week 10 — Reasoning: Ranking, Direction Sense, Days/Dates & Figures — Answer Key

Part A — Ranking, Direction Sense & Days/Dates

Q1. A) 12 — Total = (position from left) + (position from right) − 1 = 5 + 8 − 1 = 12.

Q2. A) 29 — Total = 7 + 23 − 1 = 29.

Q3. D) Esha — Order from tallest to shortest: Dev > Chetan > Aman > Bala > Esha.

Q4. B) 26 — Rank from bottom = total students − rank from top + 1 = 35 − 10 + 1 = 26.

Q5. A) East — Facing North and turning 90° clockwise (to the right) faces you East.

Q6. A) East — Facing South, a left turn faces you East.

Q7. A) 6 m East — 10 m East then 4 m West cancels partly: 10 − 4 = 6 m East of the start.

Q8. B) 8th — Adding 7 days keeps the same day of the week: 1 + 7 = 8.

Q9. B) 17th — March 1st is Sunday, so March 3rd is the 1st Tuesday, March 10th the 2nd Tuesday, and March 17th the 3rd Tuesday.

Q10. B) Team B — Team B > Team A > Team C, and Team D is lowest of all — so Team B is highest.

Q11. A) East — The rule shifts each direction one step anticlockwise around the compass (East → North, North → West); following the same turn, South → East.

Q12. C) Red — Order from top to bottom: Red, Blue, Green, Yellow.

Q13. B) Thursday — 25th=Fri, 26th=Sat, 27th=Sun, 28th=Mon, 29th=Tue, 30th=Wed (last day of the month), so the 1st of next month is Thursday.

Q14. C) Meera — Putting it together: Neha > Arjun > Kabir > Meera, so Meera is lowest.

Q15. A) 14 m North — Net northward distance = 12 − 5 + 7 = 14 m North.

Part B — Mirror Images, Embedded Figures & Geometrical Solids

Q16. B — A true mirror image flips the figure left-right only (not up-down, and not a 180° spin). Option B shows F correctly reflected left-right: the vertical stroke moves to the right side and the arms point left.

Q17. D — Option D is L reflected left-right: the vertical stroke moves to the right side with the foot pointing left at the bottom.

Q18. A — Option A is 7 reflected left-right.

> For every mirror question, check each wrong option against what it actually is: the original figure unchanged, the figure flipped upside-down (top-bottom, not left-right), and the figure spun 180°. All three look "different" from the original but are *not* a left-right mirror image — only a true left-right flip is.

Q19. B) Triangle — The composite figure is a square with a triangle overlapping its top — the triangle's outline is clearly traceable within it.

Q20. A) Rectangle — The composite figure is a circle with a rectangle overlapping its centre — the rectangle's outline is clearly traceable within it.

Q21. D) Circle — The composite figure is a triangle with a circle overlapping its lower half — the circle's outline is clearly traceable within it.

Q22. B) 6 — A cube has 6 square faces (even though only 3 are visible in this drawing, the opposite 3 are hidden behind them).

Q23. A) Cone — A cone has one flat circular base and one curved surface coming to a point (apex).

Q24. C) 2 — A cylinder has 2 flat circular faces (top and bottom) joined by one curved surface.

Scoring: 21/24 or higher — excellent, move to Week 11. 17–20/24 — solid, review the missed ones. Below 17/24 — for ranking questions, draw the line/row on paper and place each person in order before answering; for mirror questions, physically hold the page up to a real mirror (or a phone camera) if you're unsure — seeing it for real builds the intuition fastest.
